Digital Engine Tachometer

SE-1200

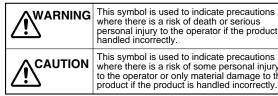

Instruction Manual

Thank you for your selection of the SE-1200 Digital Engine Tachometer.

To ensure the performance of the SE-1200, please read this manual thoroughly.

Warnings and Cautions

In this document precautions are classified into two categories: WARNING and CAUTION. This depends on the degree of danger or damage possible if the precaution is ignored and the product is used incorrectly.

personal injury to the operator if the product is handled incorrectly. This symbol is used to indicate precautions where there is a risk of some personal injury to the operator or only material damage to the product if the product is handled incorrectly.

Copyright © ONO SOKKI CO., LTD. 2007 All rights reserved.

Omission of Issuance of Certificate

This product has been tested under strict inspections for correct operation before shipment. Please note that the issuance of certificate is omitted.

Warranty

- 1. This product is covered by a warranty for a period of one year from the date of delivery.
- 2. This warranty covers free-of-charge repair during the warranty period for defects occurred while the product is used under correct operating conditions according to descriptions in this manual and notices on the unit label.
- 3. For free-of-charge repair during the warranty period, contact your dealer or your nearest Ono Sokki sales office nearbv
- 4. Even during the warranty period, the following failures will be handled on a fee basis.
- (a) Failures or damages occurring through misuse, misoperation, repairing without ONO SOKKI'S approval
- (b) Failures or damages occurring through mishandling (dropping) during transportation after purchase.
- (c) Failures or damages occurring by an Act of God (fires, earthquakes, flooding, and lightening), environmental disruption, or abnormal voltage
- (d) Replenishment of expendable supplies, spare parts, and accessories.

This guarantee covers only the performance of the product itself only. All inconvenience by the trouble of this product is not included *Outer appearance and specifications are subject to change without prior notice. HOME PAGE: http://www.onosokki.co.jp/English/english.htm

Observe the Following Points before Use

/!\ WARNING

Perform measurement using enough caution with the rotating section of the engine.

Perform measurement using enough caution with the hightemperature section of the engine.

Do not contact the equipment with the high-temperature section of the engine.

Since the equipment does not have sufficient heat resistance. be careful not to contact it with the high-temperature section (such as the exhaust pipe) of the engine.

Do not contact the equipment with any high-tension cord.

Contacting the equipment with any high-tension cord may cause malfunction or failure.

If there are two or more ignition coils, measurement is not possible.

Exact measurement may not be possible if the ignition system (distributor, high-tension cords, spark plugs, etc.) of the engine is defective

Overview

1.Overview

The SE-1200 Digital Engine Tachometer is a non-contacting type handy engine tachometer with built-in batteries and integrated detecting element, measurement section, and display.

The SE-1200 makes it possible to measure the rotational speed of a gasoline engine simply by bringing it close to the high-tension cords of the engine.

2.Features

- · Compact light-weight body with a large-sized liquid crystal displav
- · Measurement in 1-r/min unit is possible at a large measurement range.
- · Applicable to diverse gasoline engines including 2-stroke engines (with 1 to 4 cylinders) and 4-stroke engines (with 1 to 12 cylinders) with a setup of the number of cylinders.
- · Memory function useful for checking measurement values (up to 10 results can be memorized)
- · Over-range display function which fixes display value to maximum value and displays "ERROR" if measurement value exceeds each measurement range
- Continuously displays final measurement value for about 30 seconds upon completion of measurement

HT-0400 : Carrying case HT-0003 : Soft case

If you do not use the equipment for a prolonged period of time, remove the batteries from the unit.

If you do not use the equipment for a prolonged period of time, exhausted batteries may cause leakage.

Do not use or store the equipment on locations subject to rapid temperature change.

Do not move the equipment from a hot place to a cold place or vice versa. There is a risk of condensation inside the equipment which may cause failure.

Do not get water, oil, dust, or other foreign materials inside the equipment.

Avoid using the equipment on locations exposed to water or oil or locations which are very humid or dusty.

be careful not to drop it or apply excessive shock to it.

Do not drop the product or apply excessive shock to it.

Since this product incorporates high-precision electronic parts,

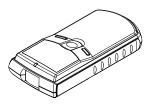

Wipe dirt off using a dry cloth or a cloth dampened with neutral detergent and squeezed firmly. Do not use volatile oils (thinner, benzine, etc.) or alcohols

3.Unpacking

When you unpack the unit, make sure that you have all the following:

SE-1200 main unit	x1
Type AAA dry battery	x3

Instruction manual

① SE-1200 main unit

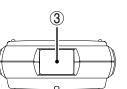

(3) Instruction manual

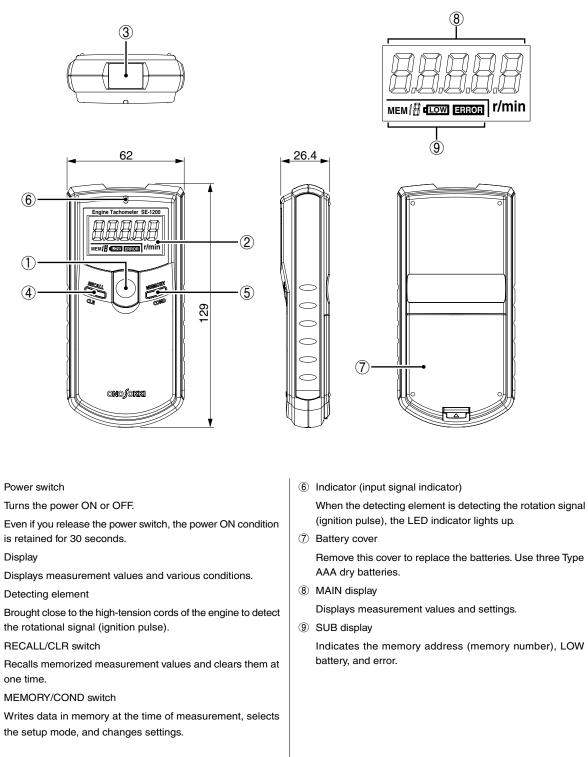

2 Type AAA dry batteries

* Since the supplied batteries are samples, some may be exhausted quickly.

Storage

The storage temperature range of the SE-1200 is -10 to +60 . When you store it, avoid locations where the temperature is extremely high or low or the humidity is high. Store it in a place which is well-ventilated and not exposed to direct sunlight. If you do not use it for a prolonged period of time, be sure to remove the batteries to prevent accident caused by battery leakage. etc.

Power switch

Turns the power ON or OFF.

- is retained for 30 seconds.
- Display

x1

- ③ Detecting element
- the rotational signal (ignition pulse).
- ④ RECALL/CLR switch
 - one time.
- 5 MEMORY/COND switch
- the setup mode, and changes settings.

Power Supply

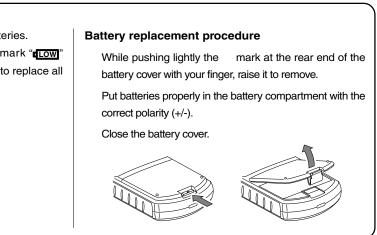

The SE-1200 operates on three Type AAA batteries. If the batteries are exhausted and the LOW mark "aLow" appears, replace them with new ones. Be sure to replace all the three batteries at the same time.

B00002009 / IM06121802(1)079(MS)020

Name and Function of Each Section

Operations

1.Setting the Number of Cylinders

Set the number of cylinders according to the type of the engine under measurement

At the time of shipment, a 4-stroke 1-cylinder engine is set. Change the setting as required.

2-stroke	4-stroke	Number of Cylinders	Measurement Range (r/min)
	1 cylinder	- 1	100 to 20,000
1 cylinder	2 cylinders	12	100 to 20,000
	3 cylinders	- 3	100 to 20,000
2 cylinders	4 cylinders	24	100 to 20,000
	5 cylinders	- 5	100 to 20,000
3 cylinders	6 cylinders	36	100 to 20,000
4 cylinders	8 cylinders	4 8	100 to 15,000
	12 cylinders	- 12	100 to 10,000

If you press and hold the MEMORY/COND switch for at least 2 seconds, the number-of-cylinders setup mode is entered and the current setting is displayed in the MAIN display. Each time you press the MEMORY/COND switch in this mode, the number of cylinders is incremented. Set a value according to the table above.

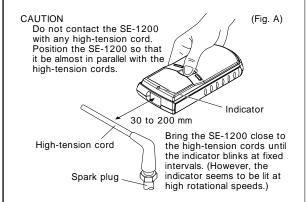

Press and hold for

at least 2 seconds

When you press the power switch to return to the measurement mode, the display value is applied. If you perform no switch operation for 30 seconds in the setup mode, the display value immediately before the power is turned OFF is applied.

2.Measurement

(1) In case of a 1-cylinder engine

Press the power switch and then bring the detecting element close to the high-tension cords (ignition cords) of the engine as shown in Fig. A. The indicator of the SE-1200 starts blinking.

When you bring the SE-1200 closer from the position at which the indicator started blinking. The indicator blinks at fixed intervals in proportion to the rotational speed. (However, the indicator seems to be lit when the blinking interval remarkably shortens, i.e., at high rotational speeds.) This position is the measurement position.

The distance between the high-tension cords and the measurement position depends on the engine type. A rough standard is 30 to 200 mm.

(2) In case of a multi-cylinder engine with a distributor Spark plugs Position at which all high-tension cords of cylinders are bundled (Fig. C) To spark plugs 30 to 200 mm High-tension cords ween the distributor Distributo and the ignition coils

As shown in Fig. B and Fig. C, bring the SE-1200 close to the position at which all high-tension cords of cylinders are bundled or the high-tension cords between the distributor and the ignition coil.

As in the case of a 1-cylinder engine, perform measurement by bringing the SE-1200 at the position where the indicator blinks at fixed intervals in proportion to the rotational speed. If the measurement distance is too far or if the SE-1200 is brought close to the position where cords are not bundled, the blinking interval prolongs making it impossible to uniformly detect ignition pulse of each cylinder.

(3) In case of a multi-cylinder engine without a distributor

With the procedures mentioned in (2), perform measurement by bringing the SE-1200 close to the position where all hightension cords of cylinders are bundled.

If there is no position where cords are bundled, the distance between the SE-1200 and each high-tension cord is not uniform, disturbing accurate measurement.

(4) Notes on measurement

Make sure that there is no obstacle between the SE-1200 and the high-tension cords.

If there is an obstacle between the SE-1200 and the hightension cords, the rotation signal (ignition pulse) is interrupted, disturbing accurate measurement.

Do not put your hand on the shaded section or the end of the SE-1200 as shown at right. Putting your hand on the shaded section or the end of the SE-1200 will degrade the sensitivity, disturbing accurate measurement.

(5) Note on use

Do not contact the SE-1200 with the high-tension cords. In particular, since high voltage is present near the spark plugs, doing so may cause malfunction or failure.

If you accidentally contact the SE-1200 with the high-tension cords and irregular display is made, turn OFF the power switch and then back ON.

Since the SE-1200 does not have heat resistance, do not contact it with the high-temperature section (such as the exhaust pipe) of the engine. Perform measurement using enough caution with the rotating section of the engine.

3.Measurement Value Memory Function

(1) Memorizing Measurement Values

To memorize the current measurement value, press the MEMORY/COND switch in the measurement mode.

When the measurement value has been memorized, the number value in the SUB display is incremented.

Up to 10 measurement values can be memorized.

When you press the MEMORY/COND switch after memorizing 10 measurement values, "FULL" is displayed in the MAIN display for about a second, indicating that no more values can be memorized.

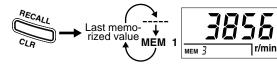

(2) Calling Measurement Values

Memory values can be called by pressing the RECALL/CLR switch in the measurement mode.

The memory number is displayed as "MEM XX" (for example, MEM 5) in the SUB display.

Memory values are called from the latest memory number and then in order of memory number, MEM 1, MEM 2, MEM 3, ... and MEM 10.

If there are three memory values, the value of MEM 3 is displayed first. Then, the SUB display displays MEM 4 and the MAIN display displays "-----" indicating that there is no measurement value memorized. Therefore, if there is no memory value, "-----" is displayed for MEM 1.

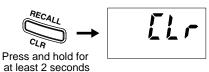

If you press the power switch to enter the measurement mode or if you perform no switch operation for 30 seconds in the RECALL mode to turn OFF the power, the RECALL mode is exited

(3) Clearing (all) memorized values

To clear the memory contents, press the RECALL/CLR switch for at least 2 seconds.

When the memory has been cleared, "CLr" is displayed in the MAIN display for about one second.

4.SUB Display

ERROR Display

If a measurement value exceeds each measurement range, the MAIN display value is fixed to the maximum value and the ER-ROR mark "ERROR" appears in the SUB display.

The maximum rotational speed which can be measured by the SE-1200 is 20,000 r/min.

LOW Battery Display

If the LOW mark "LOW" lights up, it indicates that the dry batteries have been exhausted.

- This mark lights up if the battery voltage drops to 3.3 V or lower.
- · If the mark lights up, immediately replace the three dry batteries with new ones

Using the exhausted batteries may disable measurement.
